

Evolution™ Fully Adjustable Keyboard

Unsurpassed
in flexibility &
adjustability

Note: Cables not shown

Who said you can't have your cake and eat it too?

The Kinesis Evolution™ fully adjustable ergonomic keyboard offers a unique set of ergonomic features not found in any other computer keyboard. Attached to a chair, an articulating keyboard arm, or on a keyboard tray the Evolution is the only keyboard that offers variable height with a full range of movement in all three planes. The desktop version offers full lateral separation only.

Features For Comfort

- **Variable separation:** the track mounted version of the Evolution offers up to 17.5 inches of separation between the left and right keyboard halves. The chair and desktop versions offer virtually unlimited separation.
- **Unlimited lateral tilt:** the chair and trackmount keyboard modules can be independently adjusted from zero to ninety degrees, greatly reducing forearm tension.
- **Unlimited negative tilt:** the track mounted version offers up to 30 degrees of negative tilt while the chair mounted version has an almost unlimited range of tilt adjustments.
- **Unlimited rotation:** each keyboard module can be independently rotated to adapt to a user's particular needs.
- **Adjustable height:** the track mounted version can be flush with the desk and lowered up to six inches below the desk surface accommodating the majority of body statures.
- **Light, tactile keys:** mechanical key switches provide a light touch and positive feedback.

Features For Productivity

- **Programmable:** on-board programming offers unlimited key re-mapping, plus 24 macros up to 70 characters in length. No software or drivers required.
- **Extremely easy transition:** layout is nearly identical to traditional PC compatible keyboards.
- **Pointing device is close at hand:** an integrated touchpad is offered for either right, left or dual hand use. For the ultimate in flexibility, order the Evolution with both a left and a right touchpad!

Included Accessories

- Palm pads and User's manual
